- Tab container conversion – Nov 20

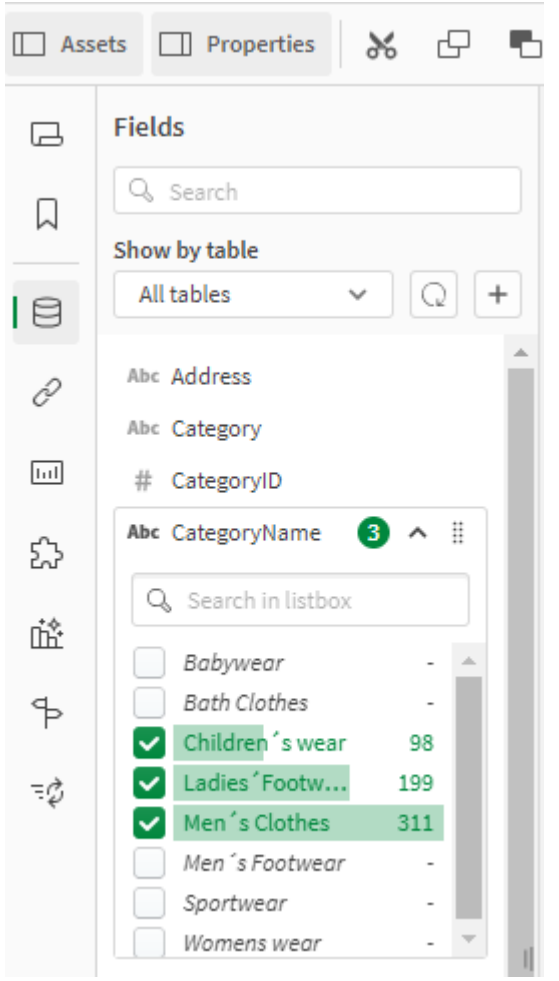
Edit mode improvements

Refreshed left side panel in edit mode

The left panel in edit mode has gotten a refresh. The tabs in Asset panel have new features thanks to new components.

Features

- Select in edit mode
- Histogram with value from simplified authoring
- Higher information density, see more
- Resizable panel, see whole fieldname
- See master dimensions and measures at the same time
- Toggle panel size

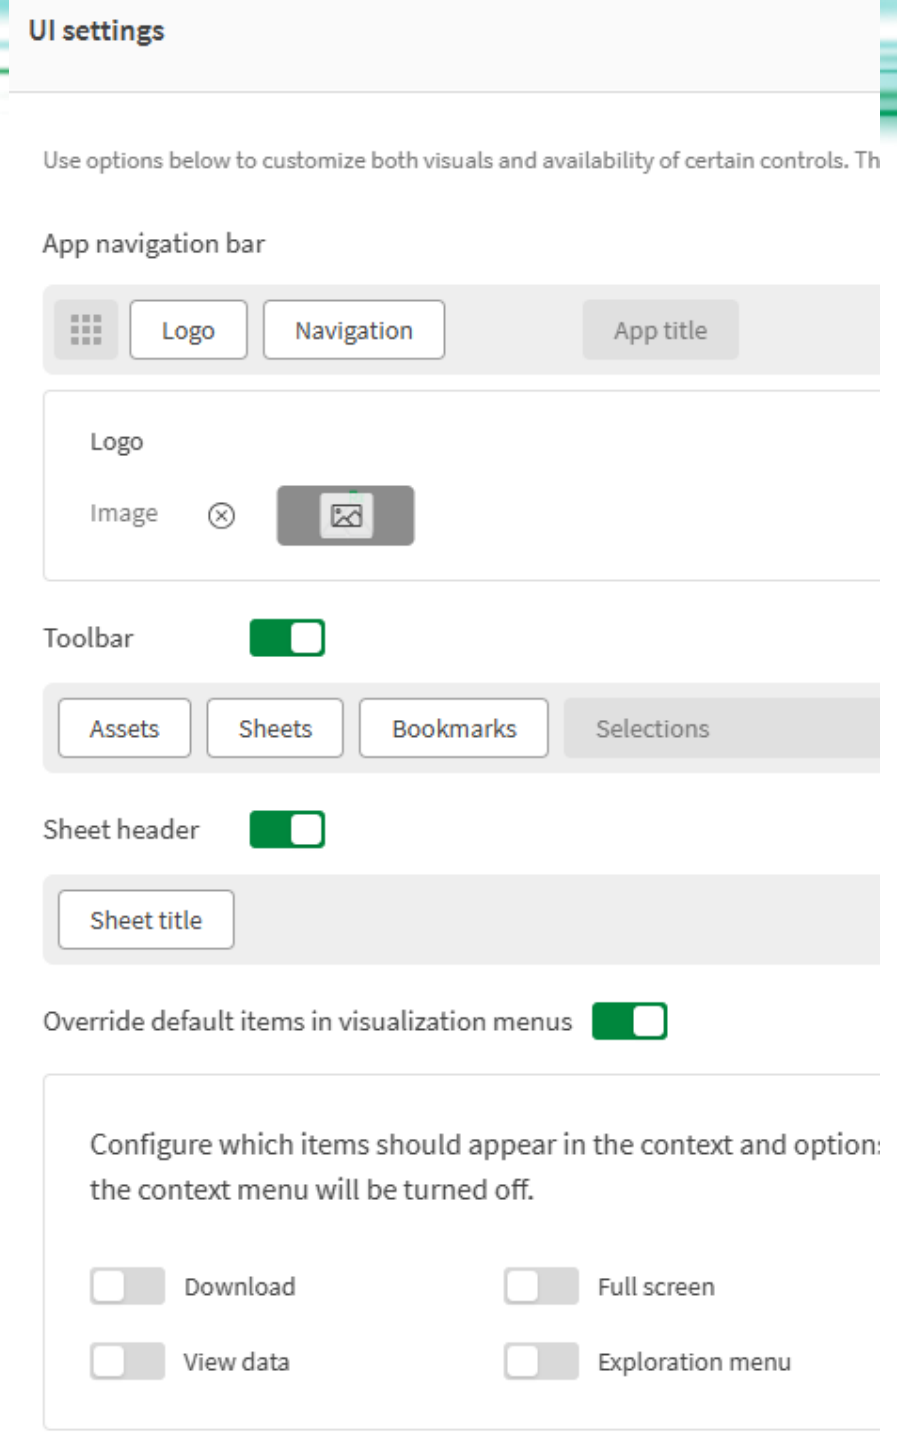


New UI Settings

More app settings

We continue to add settings to customize the UI.

- App nav bar: set custom logo per app. (Note, there is already an API to set logo per tenant in Qlik Cloud)
- Toolbar : optional buttons for Sheets and Bookmarks in addition to the Asset button
- Configure items in the visualization menu (right click, context menu)



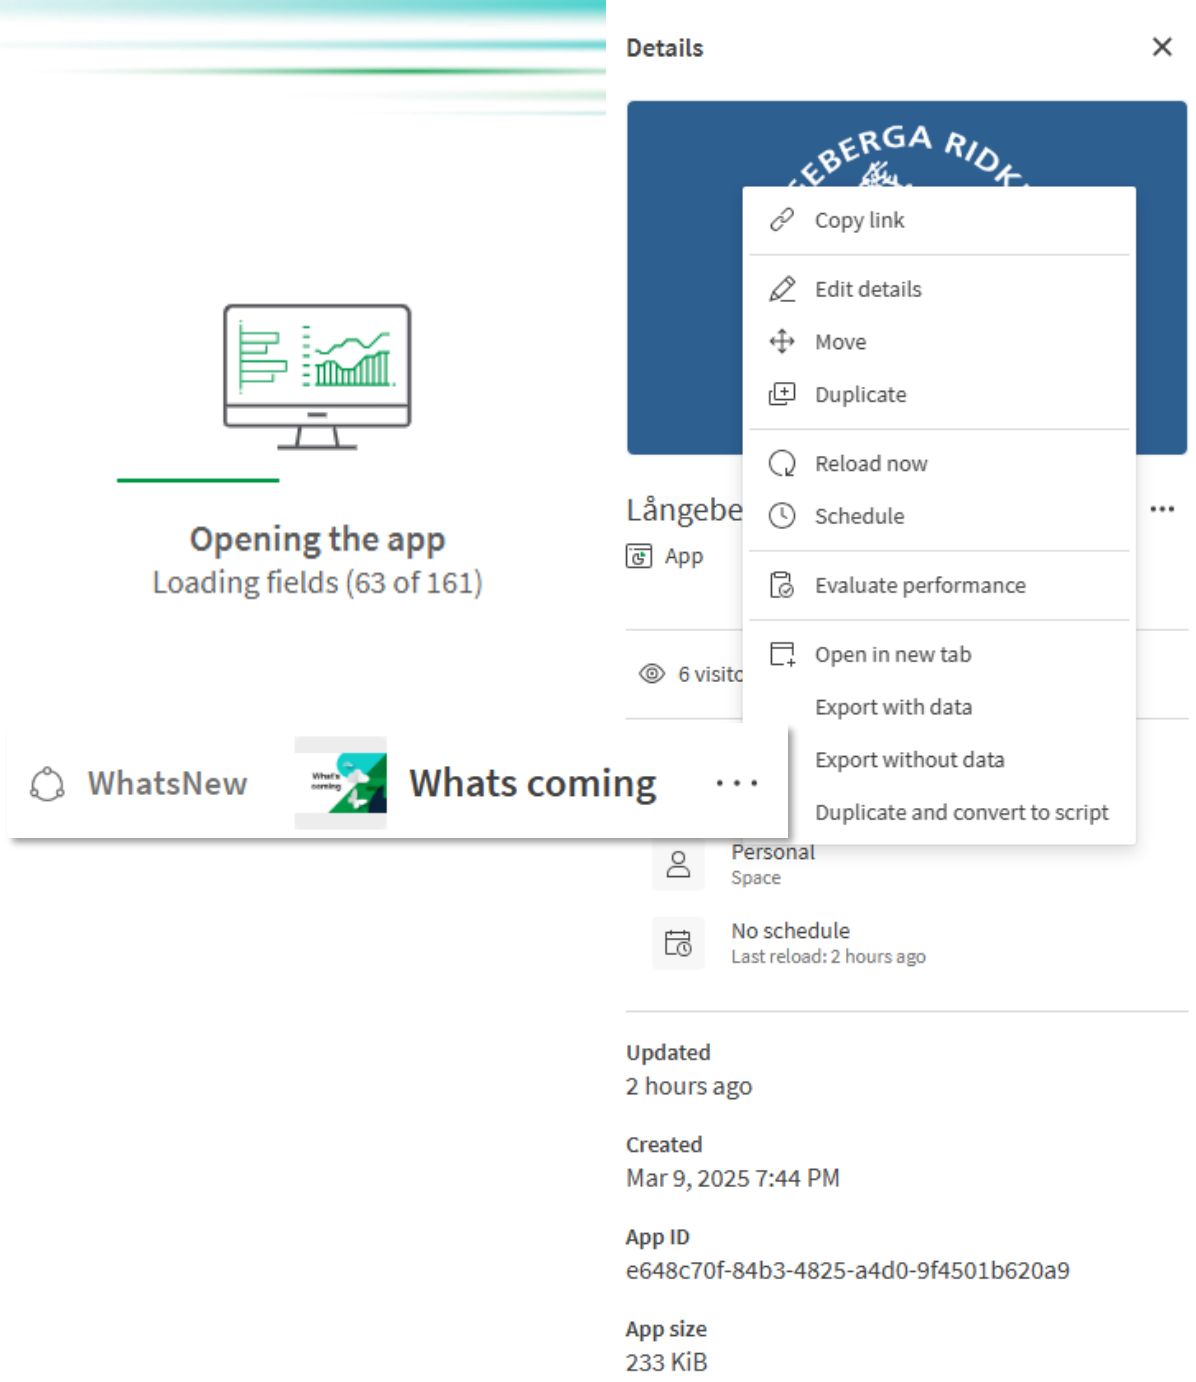
App details

Easier to and more actions in app

Quality of life improvements, easier to use and faster interaction.

Features

- Feedback on app open
- App details as overlay
- Space name in title (Cloud only)
- Common actions in app (Cloud only)
  - Move, Duplicate, Reload
  - Schedule, Export



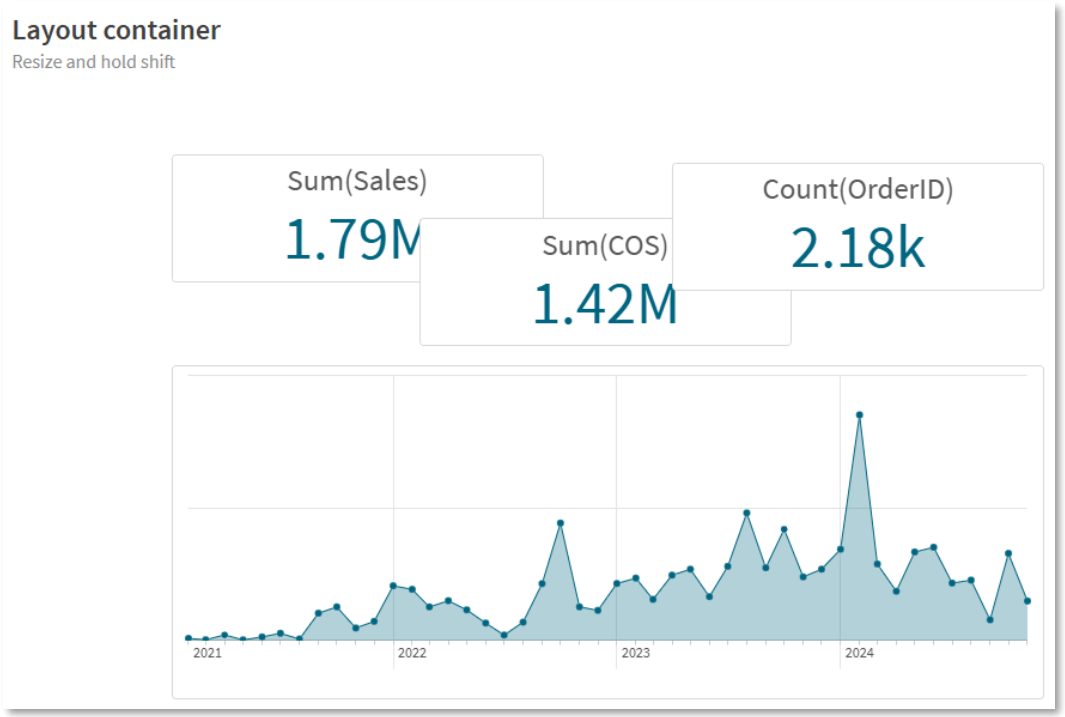
Layout container

Resize options and custom tooltip support

The Layout container gets easier to work with and support for custom tooltips.

Features

- Resize and maintain size objects inside
  - Hold shift and resize the frame
- Custom tooltip support in container



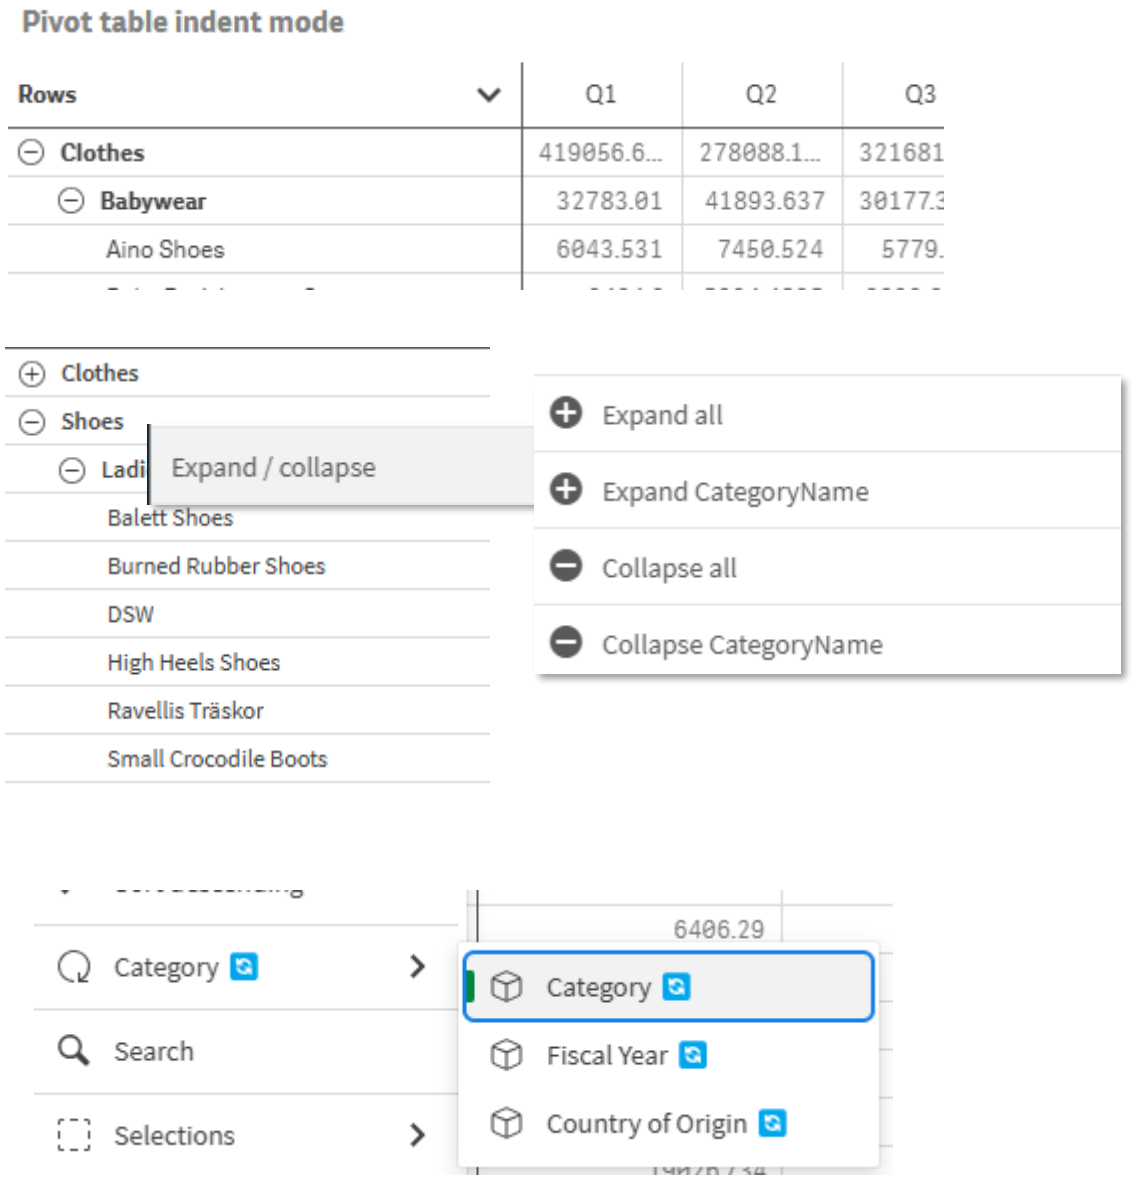
Pivot table

More improvements

New features and styling options make the new Pivot more complete.

Features

- Indentation mode
- Links in indentation mode
- Range selection support
- Right to left support
- Expand and collapse in view mode
- Cyclic dimension drop down



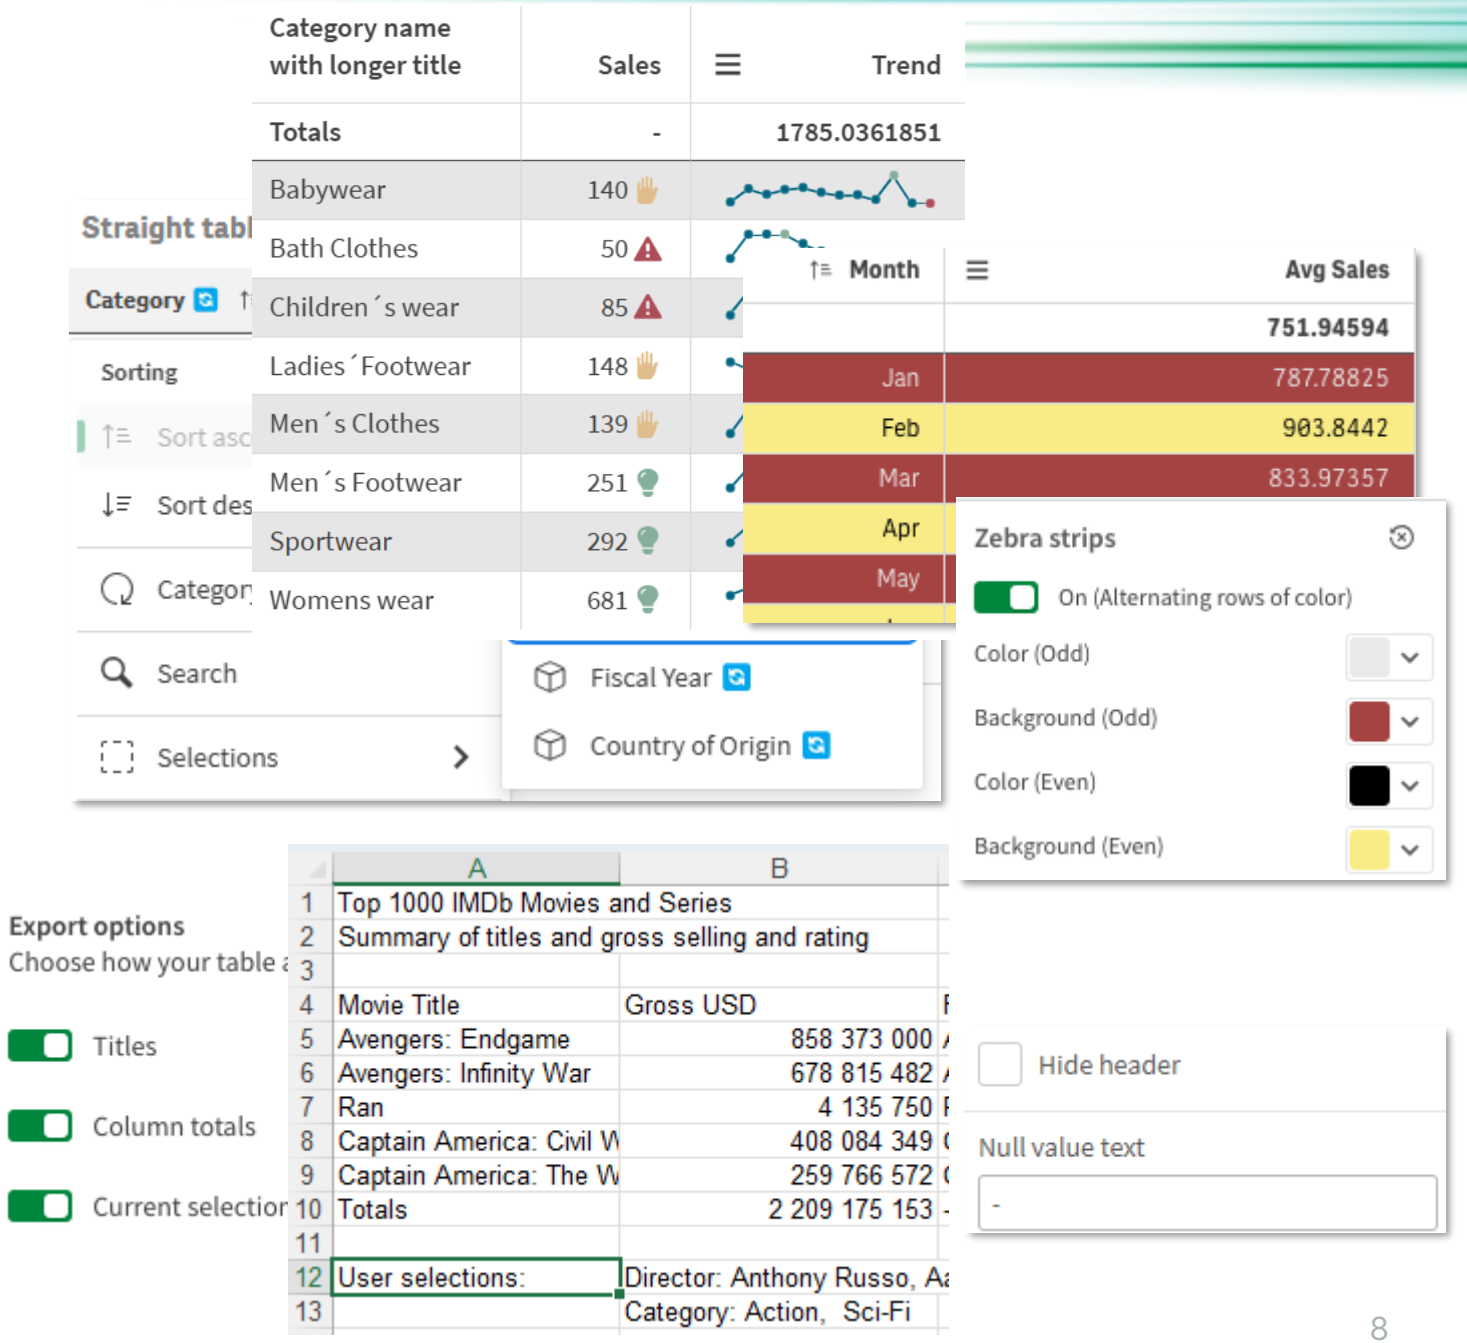
Straight table

Further enhancements

New features and styling options in the new Straight table.

Features

- Background color and image
- Word wrap cells and headers
- Mini charts
- Indicators
- Null value settings
- Show hide header
- Pajama striping
- Cyclic dimension drop down
- Titles, totals and selection info in data export (cloud only)



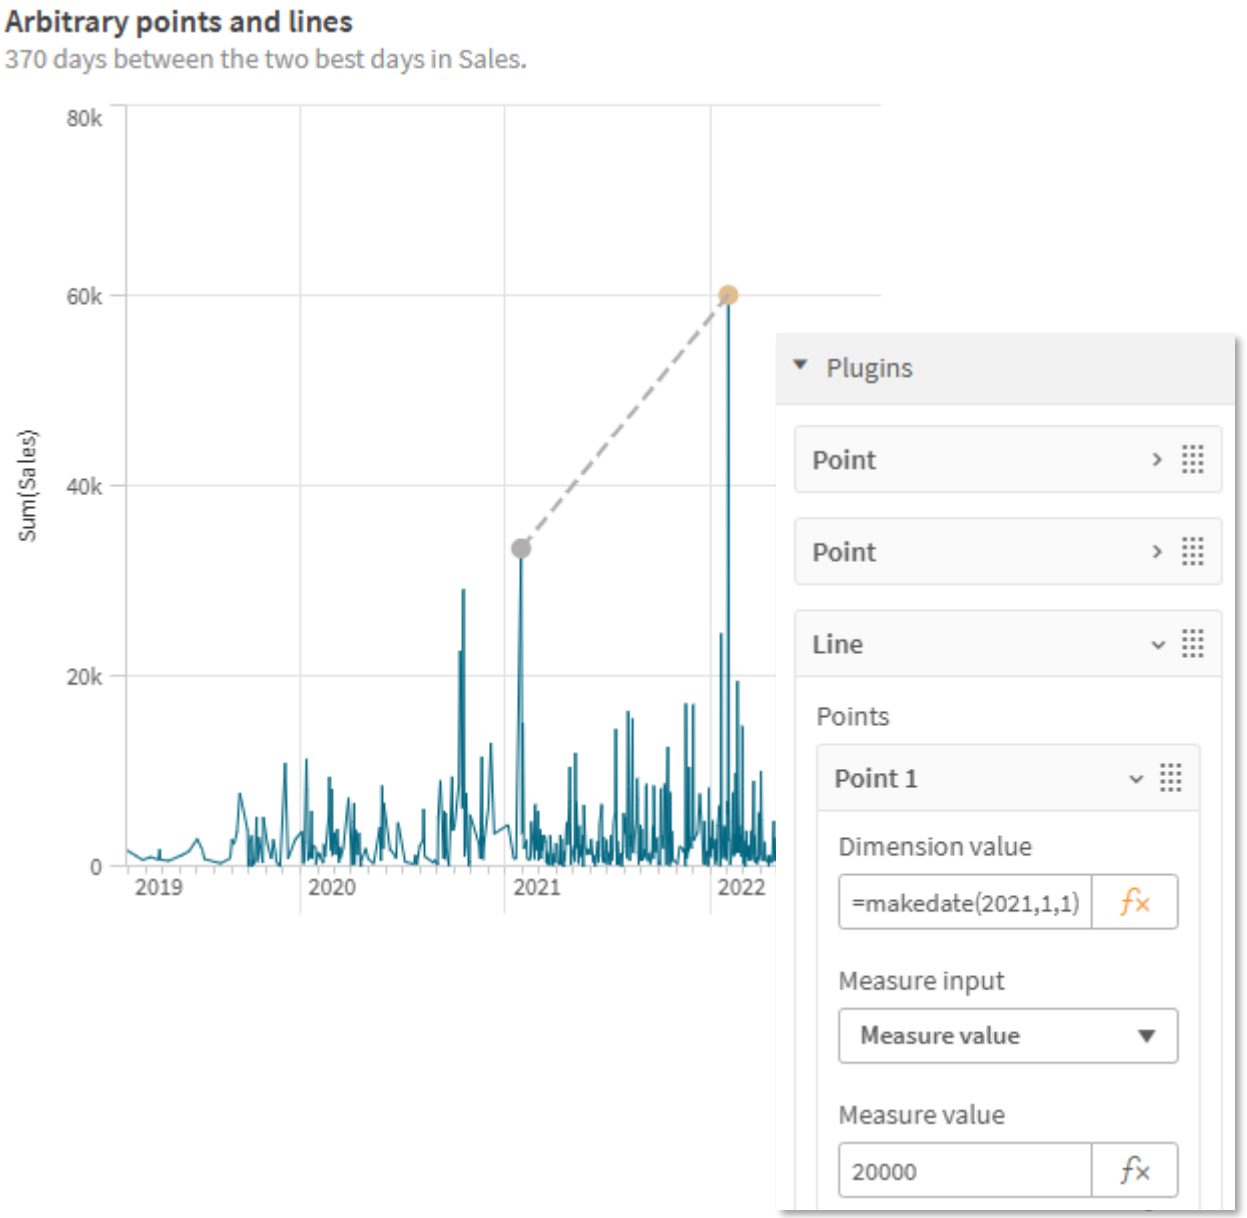
Line chart

Points and lines for annotations

New option under Add-ons: Plugins > Point and Line. Useful for adding indicators as annotations in the chart

Features

- Point color, size, outline
- Line color, size, type, stroke
- Specify with measure value and or index



Scatter plot improvements

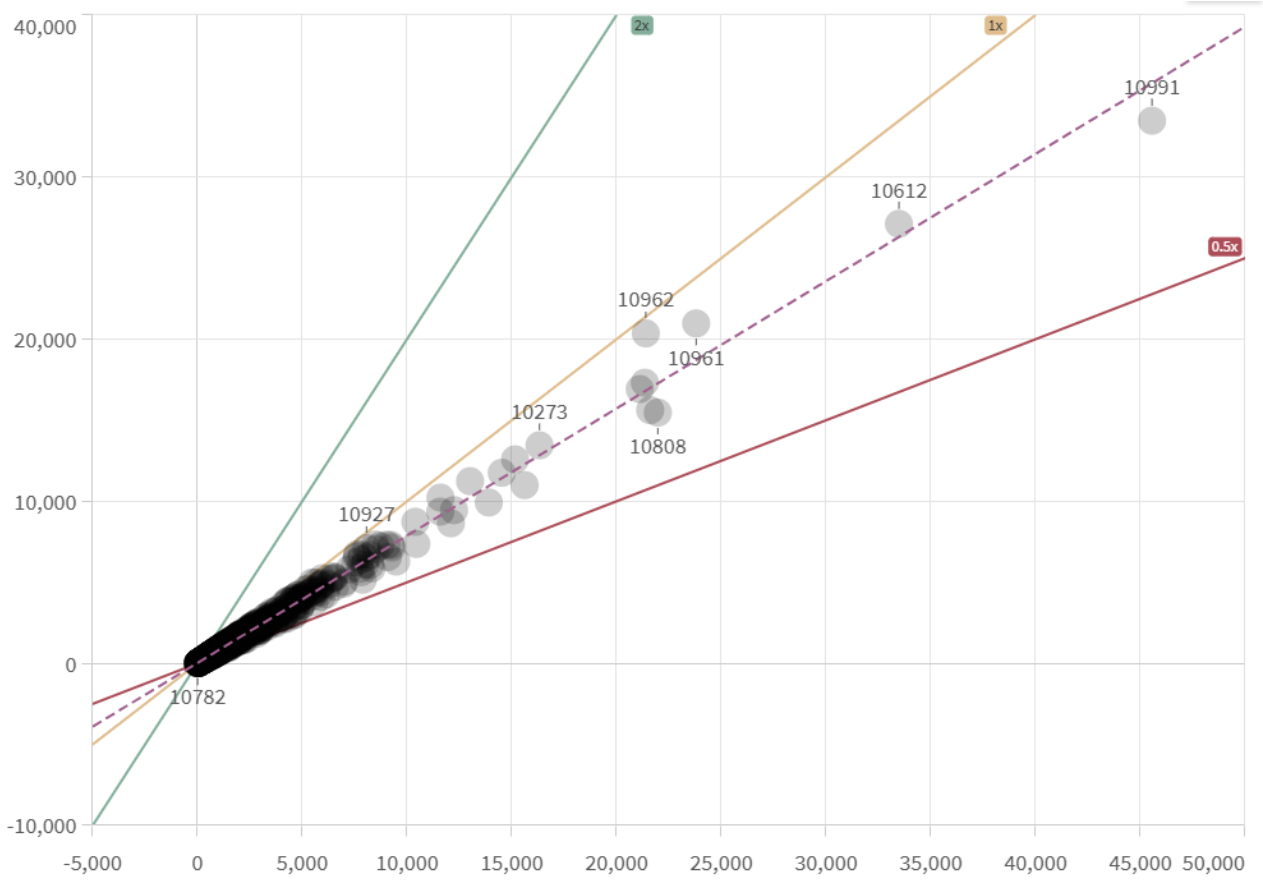
Reference line with slope and set custom outline color

Slope of Y-axis reference lines. Manually enter lines with positive or negative slope.

- Slope is the k in y=kx+m, m is the line value
- Use it to show visually how well a value correlates
- In addition to calculated regression lines

Set outline color. Turn off or tone down outline when showing a large volume of bubbles.

- Outline color
- Outline transparency
- Outline width



Map chart

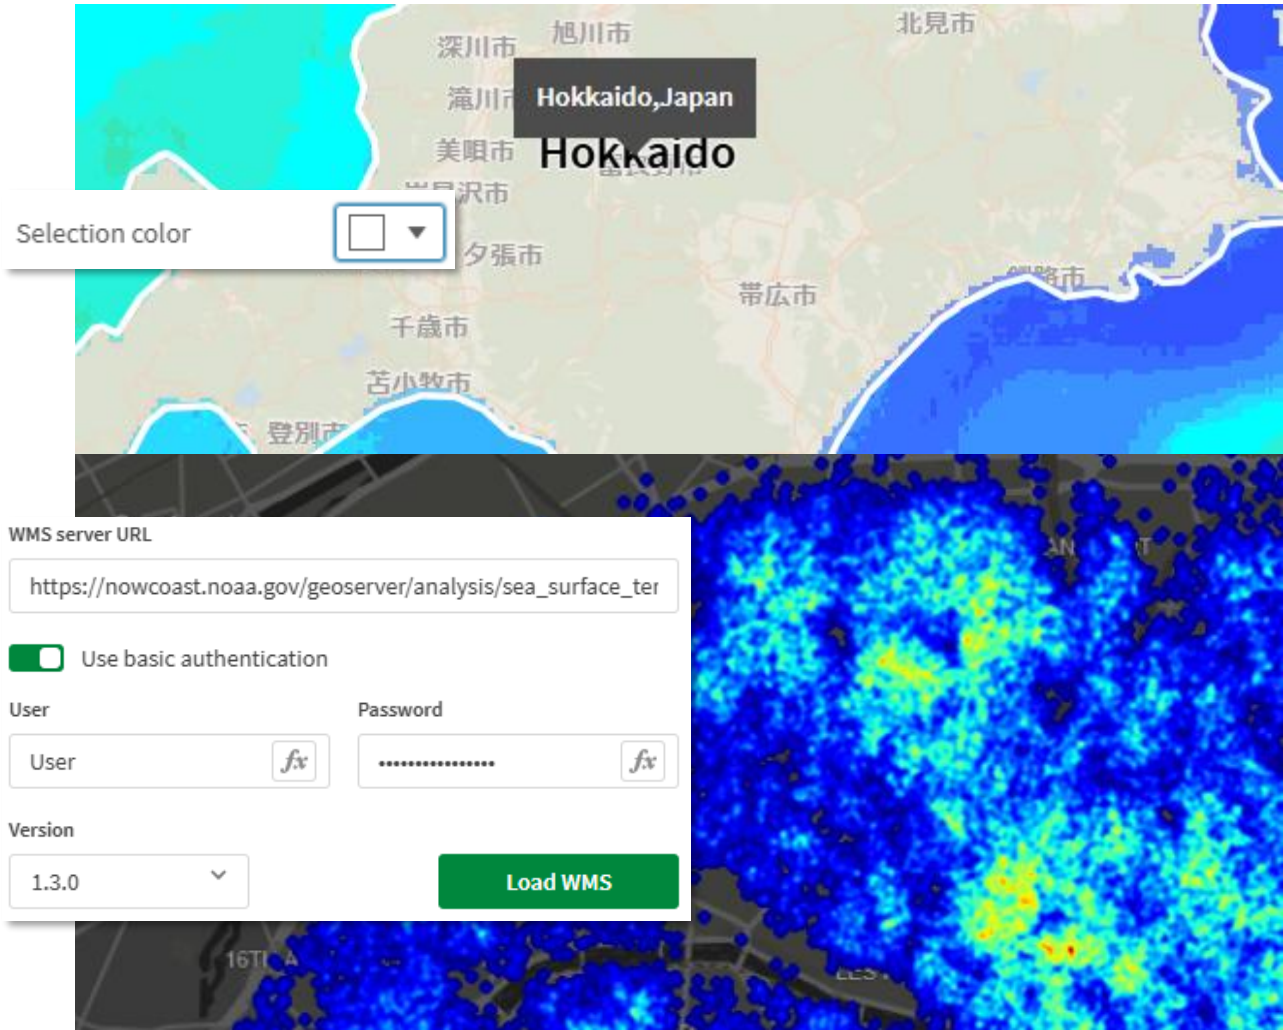
Custom selection color and WMS enhancements

Useful for

- Style the map as you want
- Interact with protected WMS services

Feature

- Set the selection outline color
- User credential fields for Basic authentication in the WMS setup in the Background layer



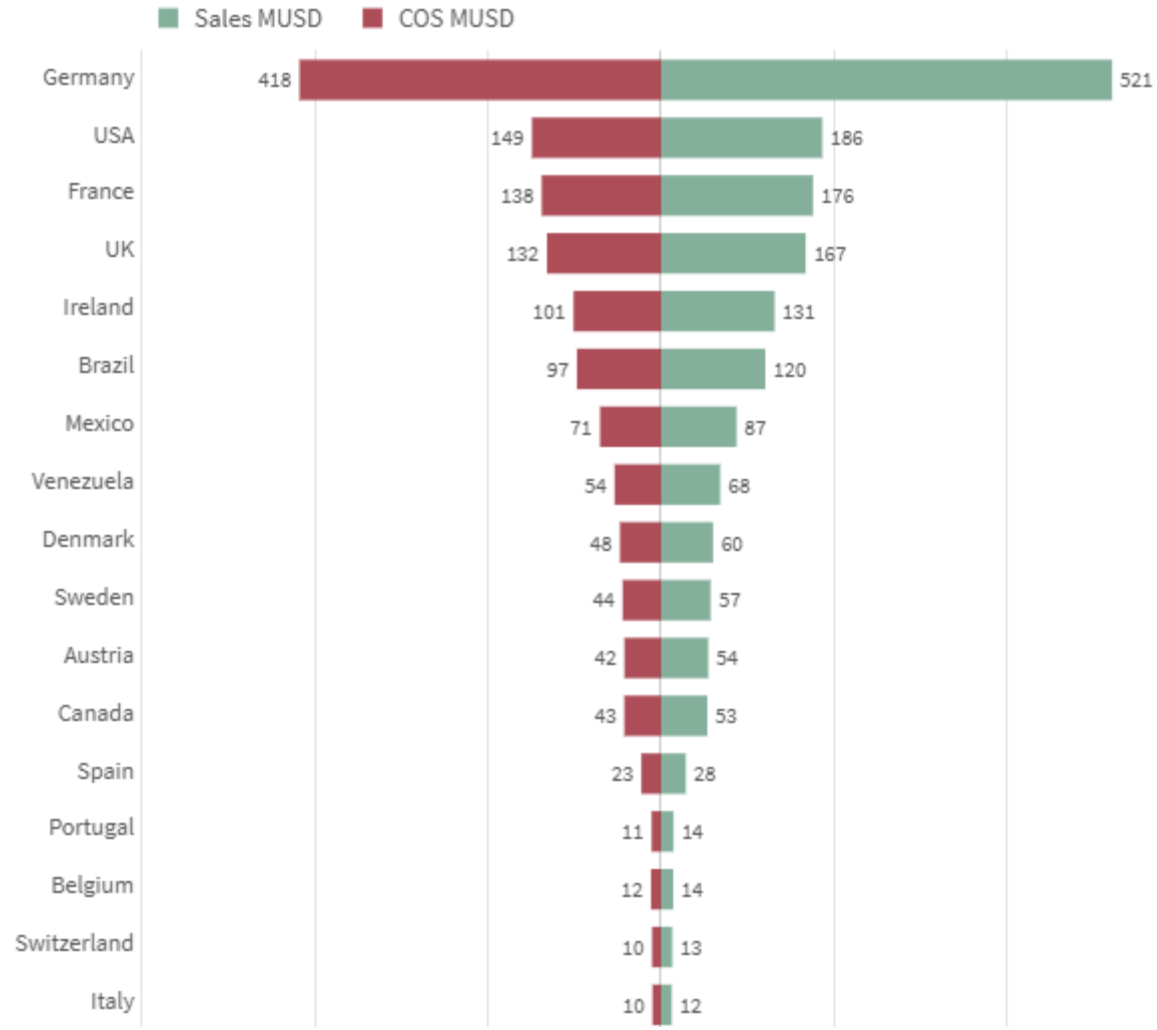
Butterfly chart

Bar chart gets mode for butterfly presentation

Useful for comparing two positive measures over a dimension. Popular for population age statistics but any measures can be used.

Features

- Two measures
- Horizontal or vertical

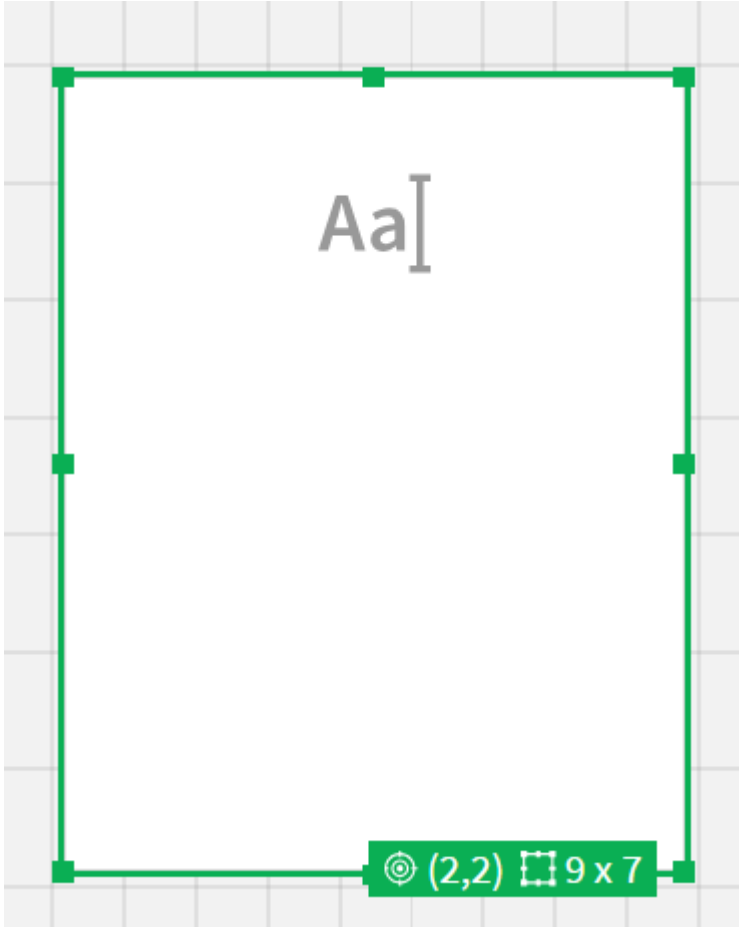


Qlik

Text

Enhancement to Text object in the bundle

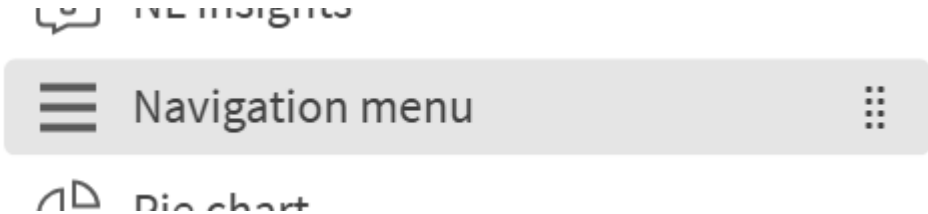
- Convert marked text instead of just the row the cursor is on to bullet list.
- Highlight measure in object when editing in properties.
- Hover and details off default for new objects
- Toggle border off, transparent instead of faint grey
- Up to 100 Measures per object
- Remove the Aa| icon from the empty chart



Nav menu

Improvements based on feedback

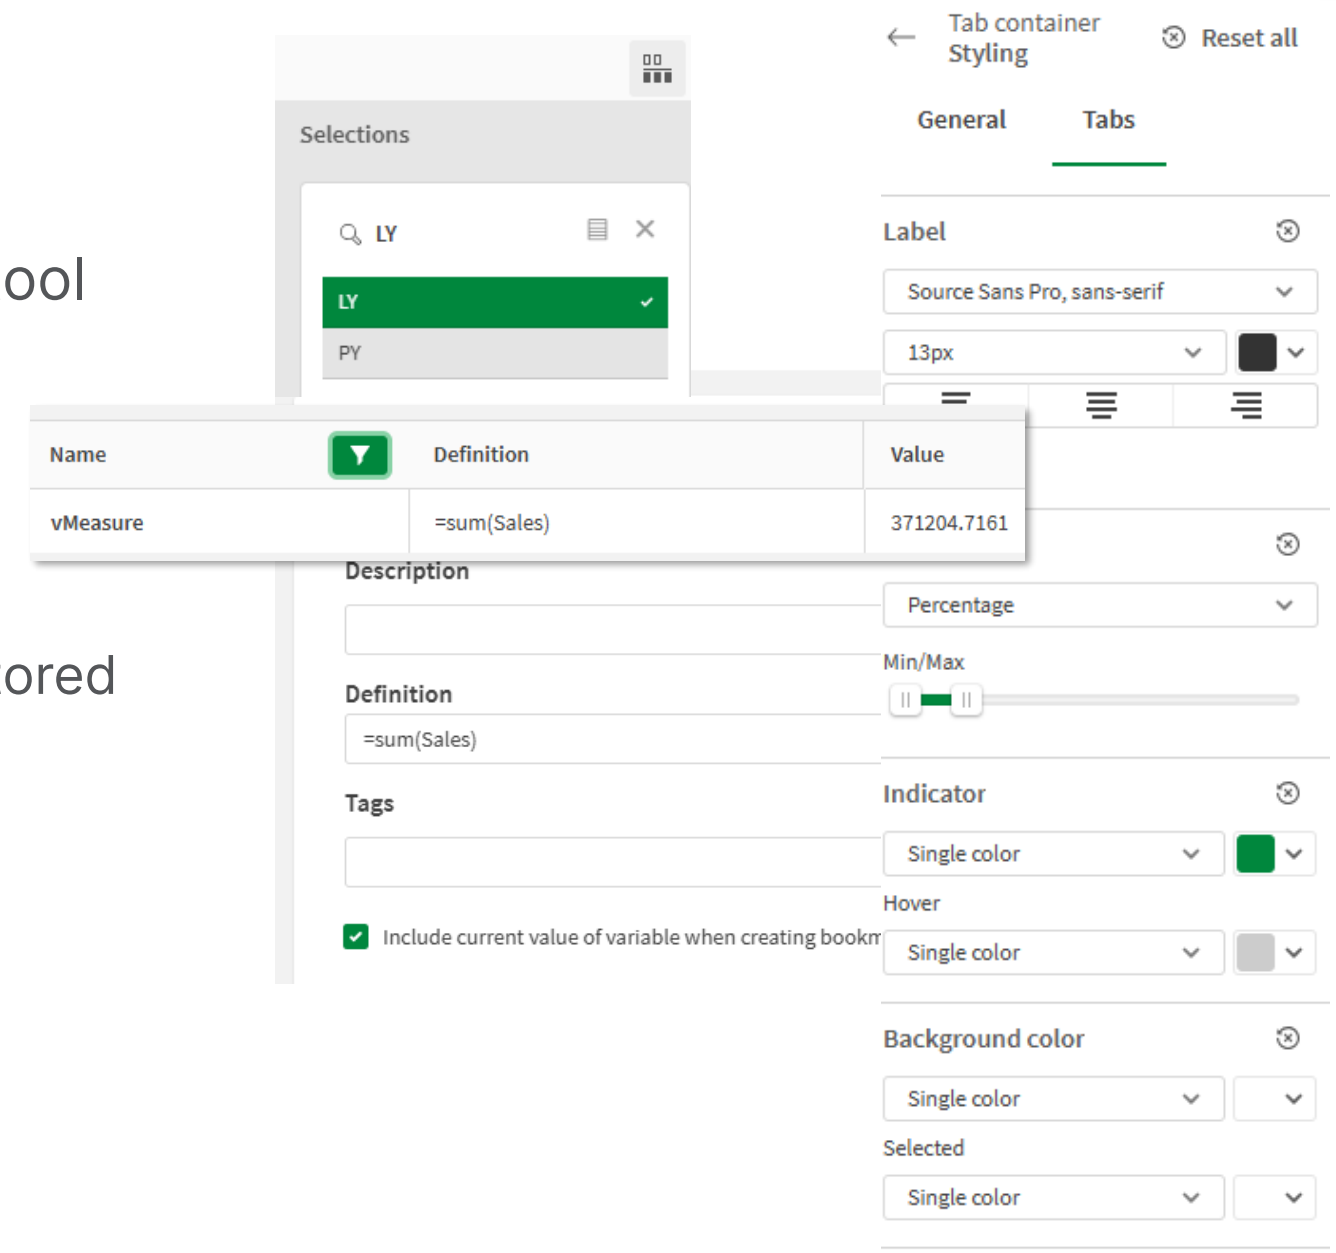
- Hovering menu is turned off by default
- Sheet title expression support
- Drawer panel to the left or the right
- The expanding icon for group is moved to the left
- "Separate items" mode on:
  - Space of 8px is shown between menu items
  - Border and shadow is applied to each item instead of a whole menu
- "Separate items" mode off:
  - New toggle "Use divider" for on/off a divider between menu items
- Improved in padding and margin in many scenarios
- Icons and group arrows now also respect the label color



More

Further enhancements

- Calculated dimensions in selection tool
  - Just like in the selection bar
- Variable session value in dialogue
  - Useful for developers
- Include variable in bookmark
  - Make sure UI state variables gets stored
  - Use instead of bookmark option
- Tab container conversion
  - Drag and drop convert and enable new features



Qlik

Deprecation of bundled charts

Upgrade to new and better functionality

The following will be removed from the distribution in May 2026.

- Bar&Area, Bullet chart (old one), Heatmap chart, Multi KPI, Button for navigation, Share button, Show/hide container, Tabbed container.

Follow links above for tips on replacing.

If you used CSS modifications in the past, here's a list of native settings you can use instead.

The deprecated charts were first removed from the asset panel, so no new instances could be created.
