## REFERENCE ARCHITECTURE

# The Best Performance In The Market

(personal experience:)

Sufficient time for transformations:

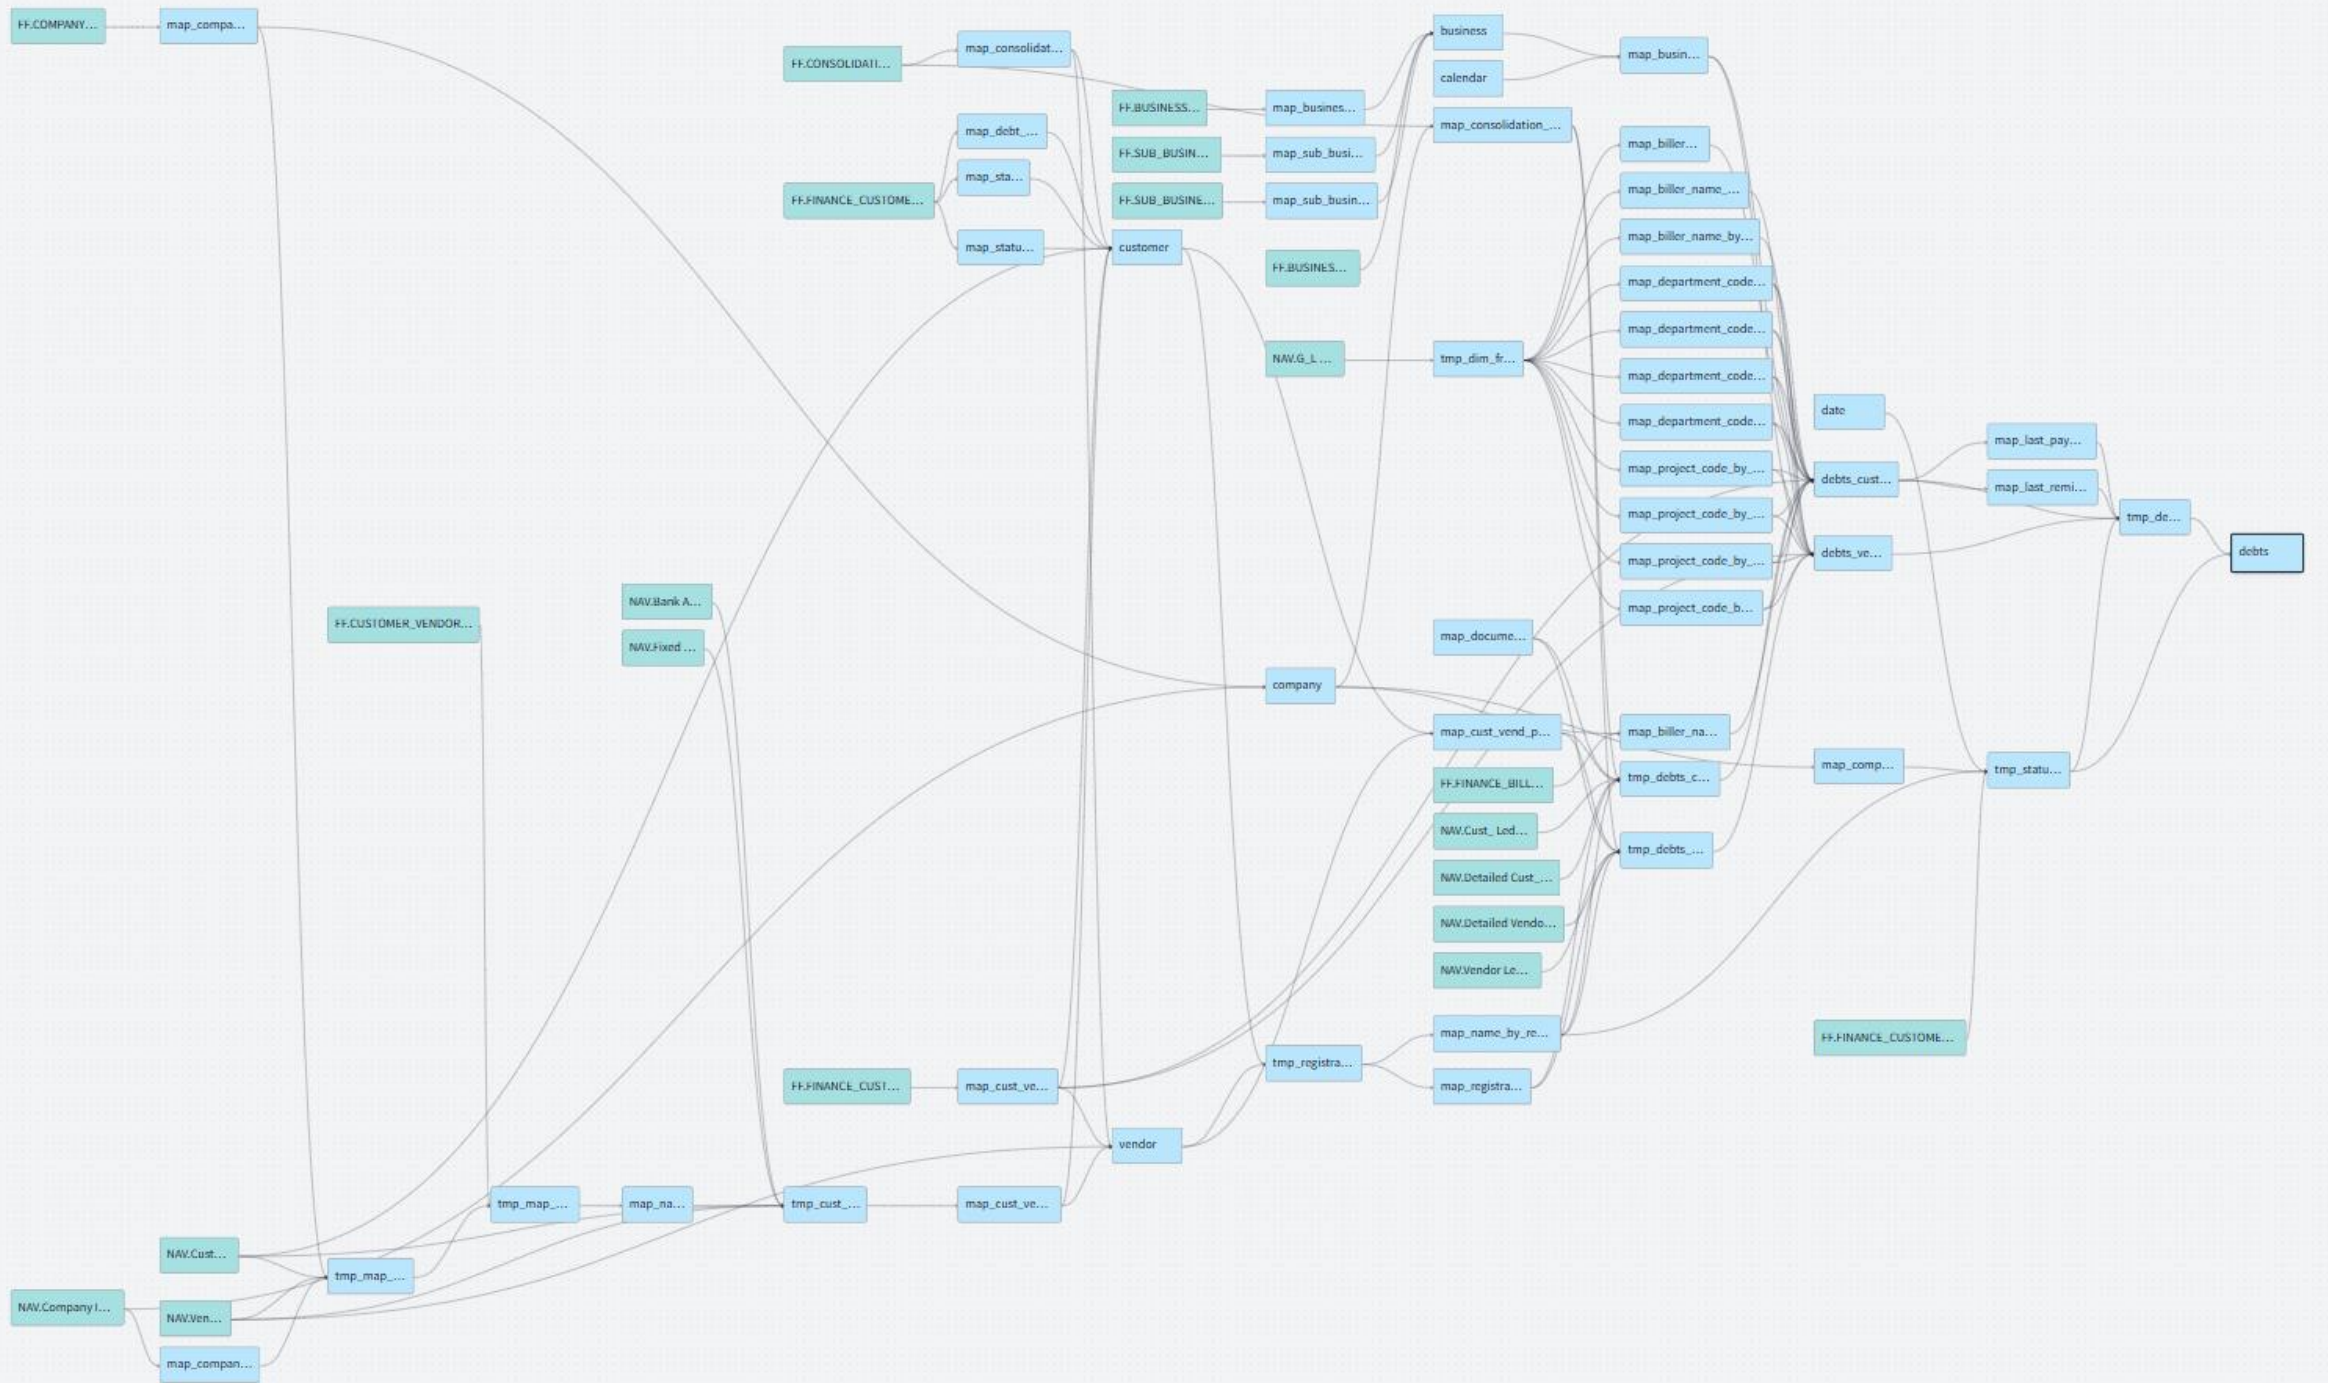

- Allows for a longer transformation period (especially if not all data is processed overnight)
- Time for additional transformations and tests
- Enables more complex or heavy transformations (e.g., stock aging, lost sales analysis, stock forecasting)
- In case of an accident, fixing and reloading data takes less time

• . . . . .

## Data Quality

- Storing of intermediate results

## Data Quality

- Storing of intermediate results
- Data tests
- Time travel

# Monitoring

- Query history
- Price for each warehouse, TAG
- Price for each query if needed

# Governance

- Query history
- Access history
- Data masking
