# Our History

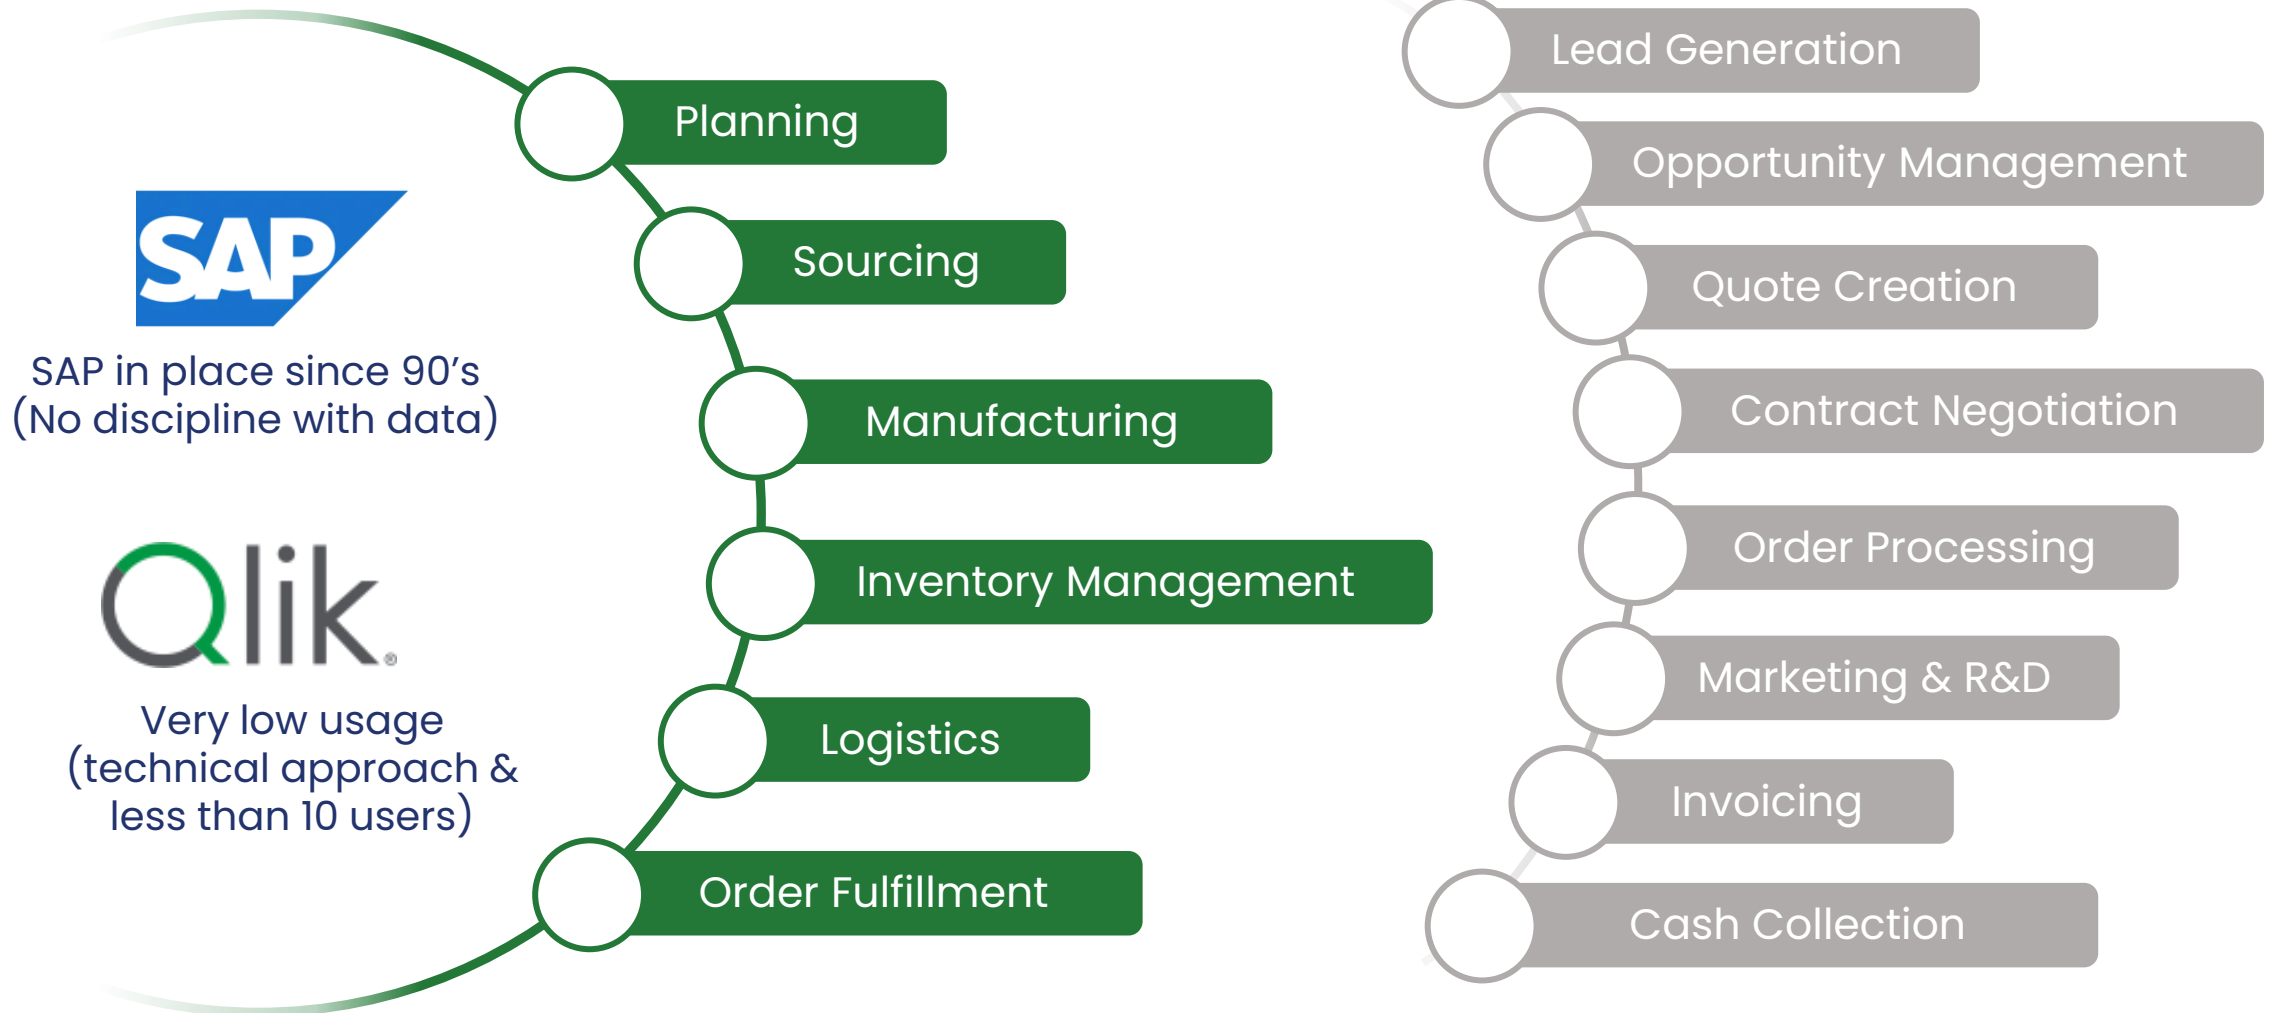

**40 years of experience in the Starches & Sweeteners Industry**

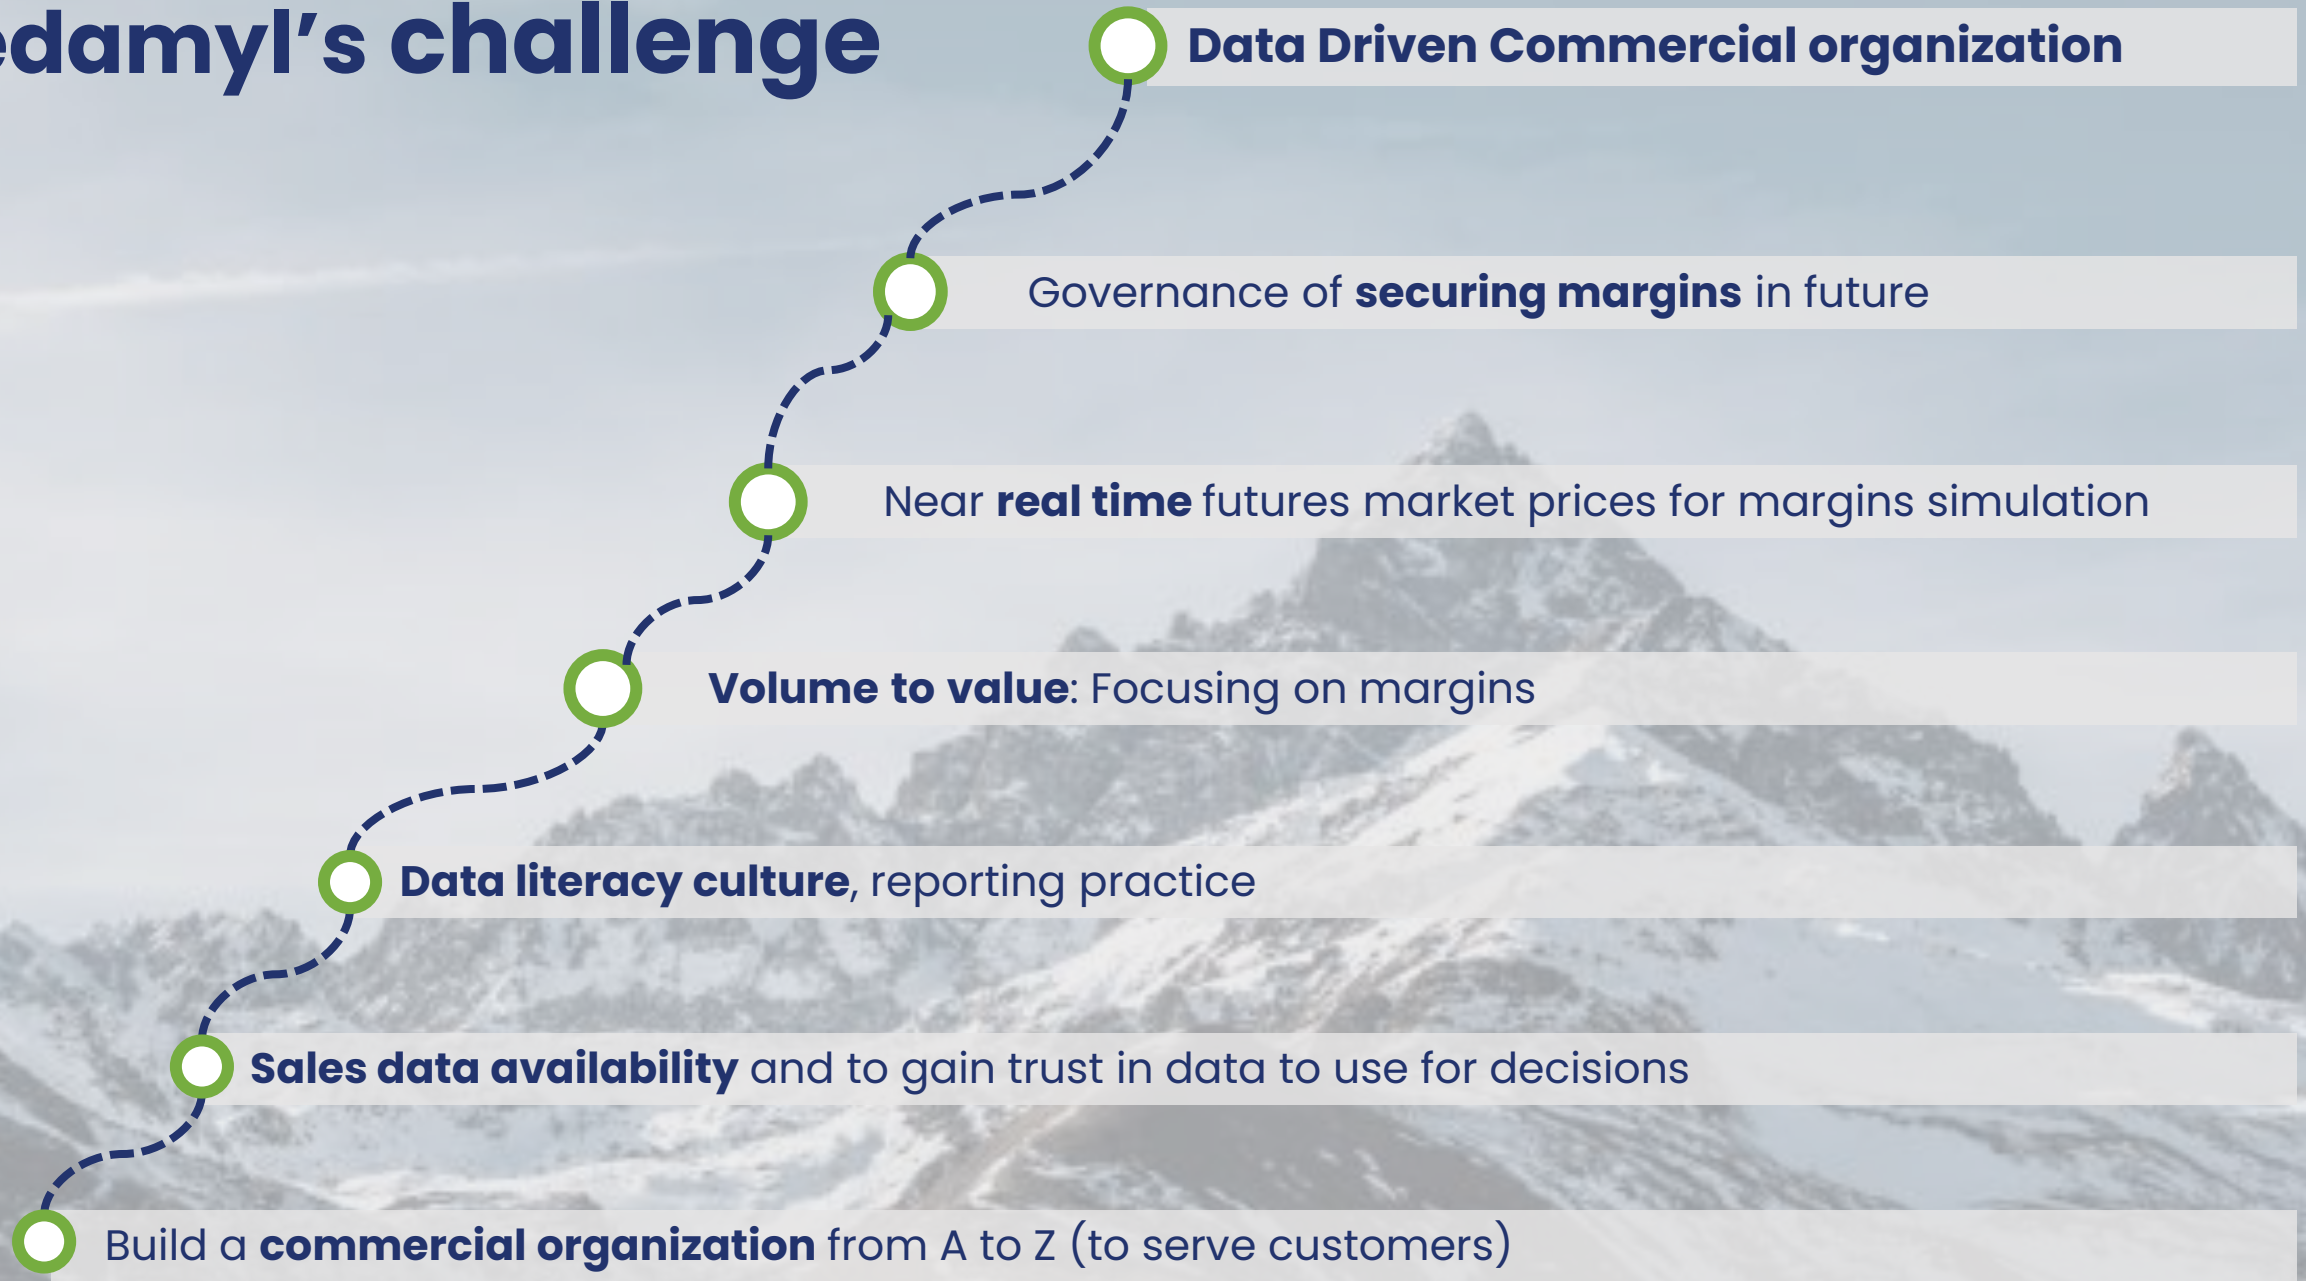

# The starting state

**No Commercial organization** in place

# Sedamyl's challenge

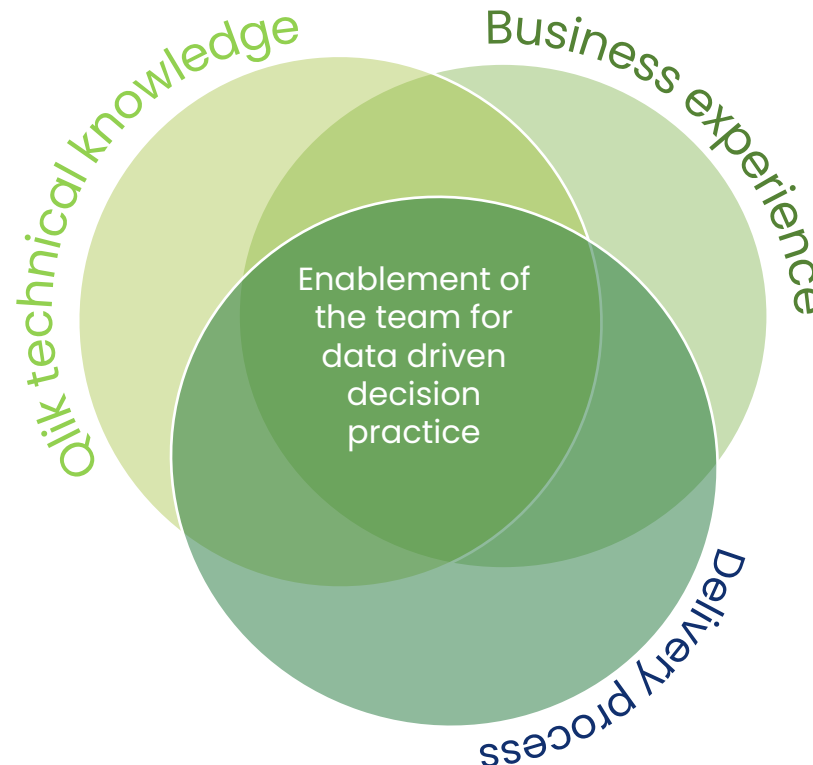

# Partnership with The Infotrust

We had to **select a trusted partner** for long journey to build data analytics culture

- Adopted a **360° business review**
  - Data analytics as a business initiative, not just IT
  - Essential commitment from top management
  - Defined champions with proper training
- The Infotrust actively listened and provided strategic guidance for next steps

- **Solving complex data models without creating clutter**
- Managed deployment
- 19 years with Qlik

- **Industry commerce knowledge**
- 360-degree business discovery
- Top management aligned
- **Speed in prototyping**
- Resource scaling for development
- Service plans over T&M

# A map is a critical tool for planning your journey

# Finding the sweet spot

Public interest is **creating value**

A group of people are working in a modern, open-plan office. The office features exposed brick walls, large windows, and a high ceiling with industrial-style lighting. Several people are seated at long white tables, working on laptops and tablets. A large screen on the wall displays a video conference with a man wearing glasses and a headset. The office is furnished with black ergonomic chairs and has a red-tiled floor.

# Business discovery sessions: Apps road map

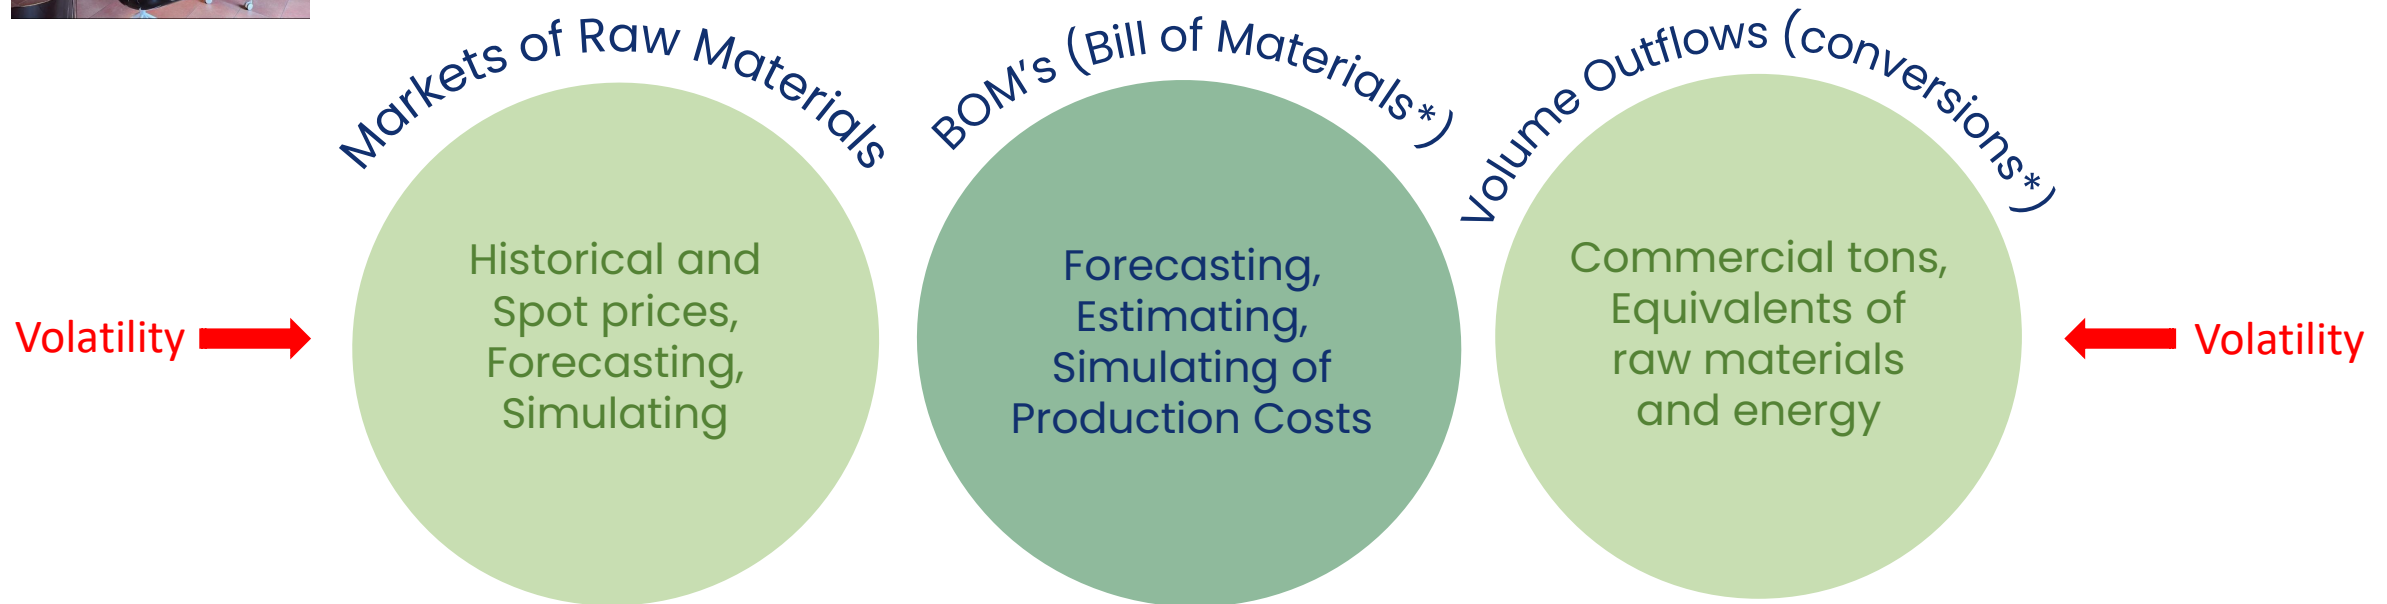

11

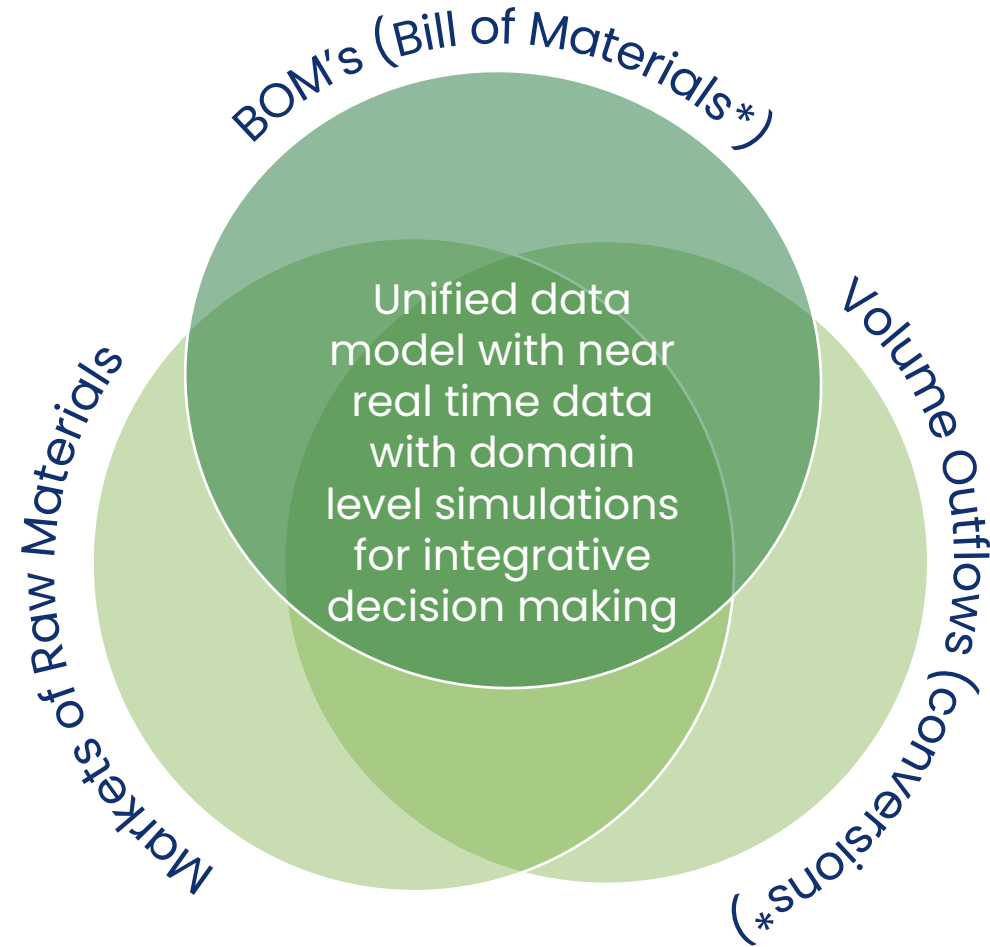

# Business discovery sessions – siloes identified

# Business discovery sessions: siloes identified

# First steps on the road: volume to value

## Business requirements

New sales organization requiring data analytics

Mindset change from volume to value asks focus on margins

Production cost and raw material prices visibility

Secure margins in (almost) real time by linking sales to purchasing operation

Production cost optimization

## Conclusions & decisions

Sales analytics & Debtors analysis

Production Benchmarking

**Product Costing & Margins**

**Risk management (securing margins future)**

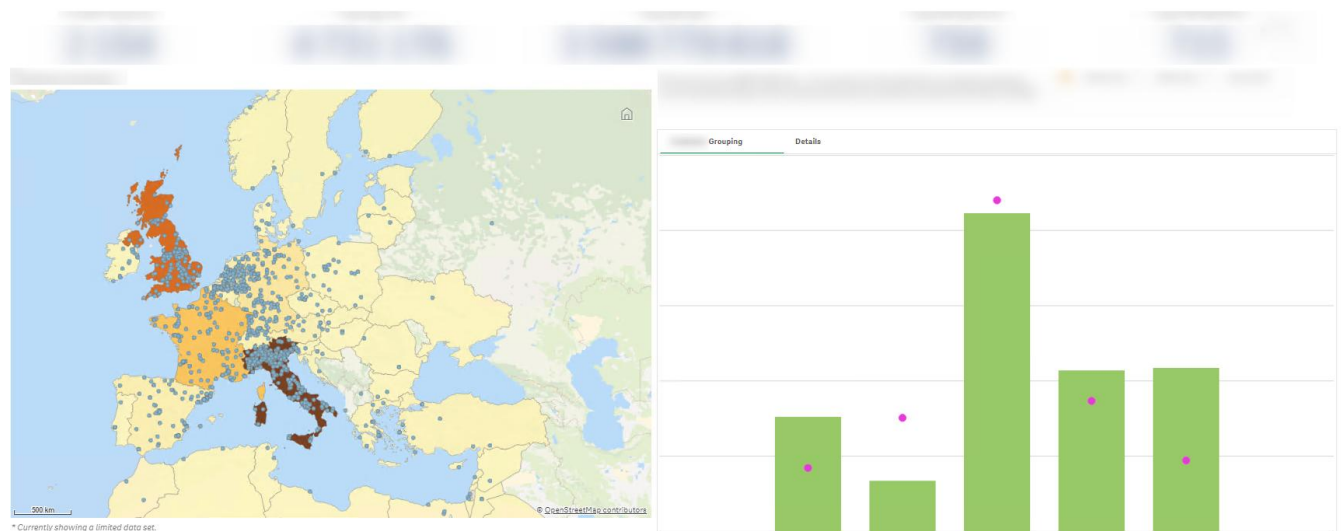

# Sales analytics & Debtors analysis

## Achievement

- Beginning of BI center of excellence
- Significantly reduced data preparation process and improved data quality
- Reduced cash collection time and bad debts

YTD 2024-01-01-2024-10-22

\* Currently showing a limited data set.

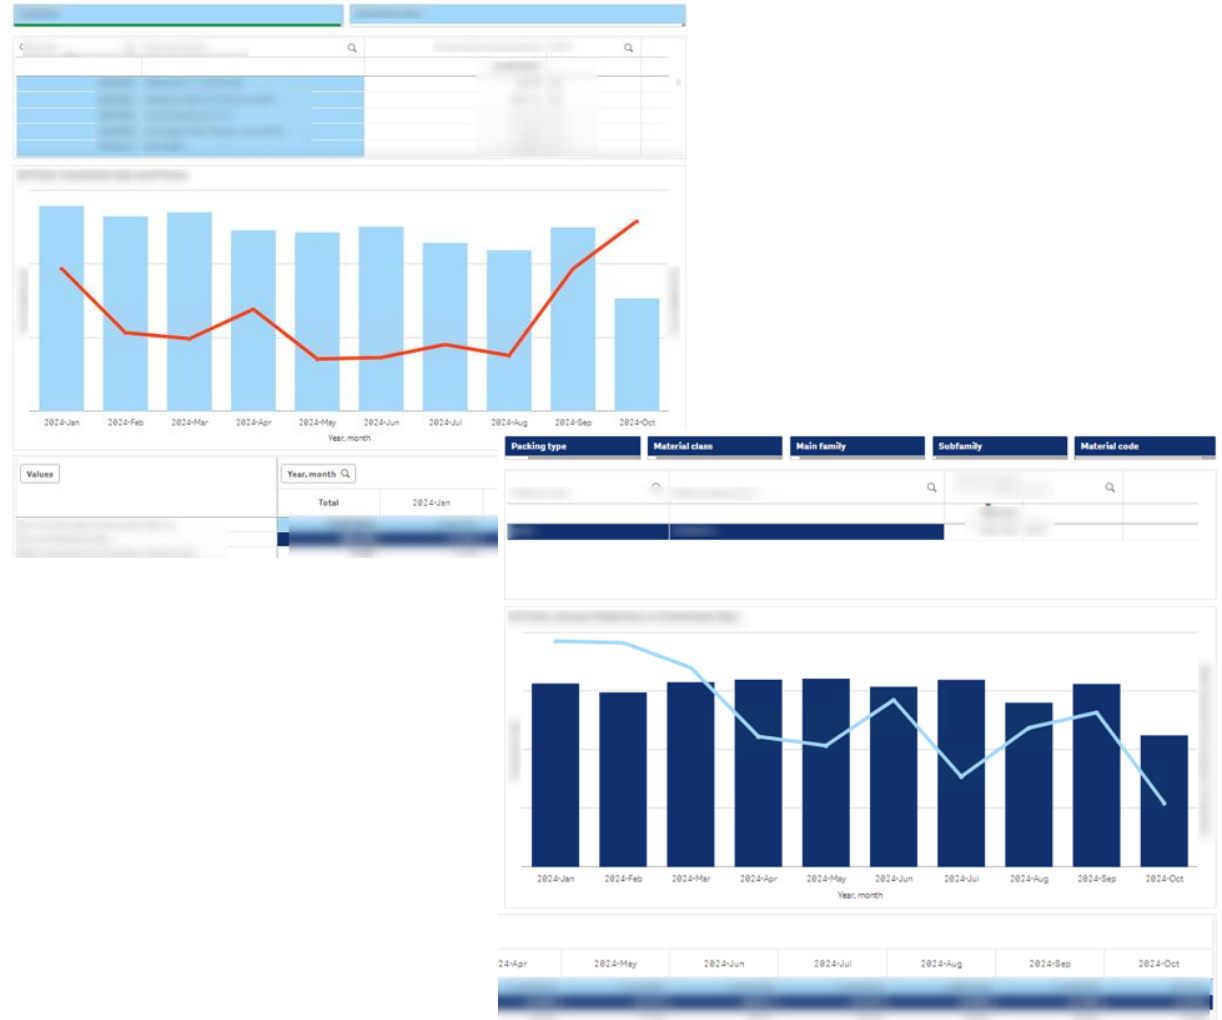

# Production Benchmarking application

## Achievement

- Improved production process
- Reduced cost and consumption of chemicals
- Target => simulate future stocks

# Product Costing & Margins application

## Achievement

- Accurately simulated commercial margin
- Improved decision-making time in contract negotiations
- Increased trust in data and is enabled to use it on hourly basis

# Result impact on business end results

Implementation of  
**RISK Management  
& Product Costing  
applications**  
resulted in a  
significant  
**improvement of  
our margins**

- 6 x times increase in usage
- sustainable process with no partner lock
- available business requirements documentation
- becoming autonomous in developing process
- long term trust and efficiency with The Infotrust

## Next steps

**We're confident  
to start exploring  
the AI potential**

- the data analytics delivery journey is not finished yet (will never be...)
- we're working at improvements and new deliveries on secured margin, finance analysis, finished product stock estimation

# Lessons learned

- Technology is important – but is not the most important part when it works
- Business is driving value – even do not start analytics without an owner
- Have clear objectives – develop a roadmap to achieve that
- Be patient, culture cannot be changed in a month – highest results will come in 1–3 years
- Data literacy should be as a continuous and recurring initiative – one time is not enough
- Look for a partner who shares responsibility for the business value created with you
- Capitalize on the achieved and review/develop new roadmap
